ABOUT

As a full stack engineer, I build web-based software products with a focus on the end user. I am especially interested in the scalability and maintainability of the software itself, ensuring the ability to iterate and respond quickly to changing requirements and demand. I value knowledge sharing, collaboration, and documentation as ways to grow individually as well as a team. I enjoy automation and developer tooling, simplifying repeated tasks and workflows.

TECHNOLOGIES

- Ruby on Rails
- Django
- Python
- JavaScript
- React
- Redux
- Docker
- HTML
- CSS
- Git
- Bash/Shell scripting

EXPERIENCE

Skilljar, Seattle, WA

Software Engineer I, Mar 2020 - Present

- Django, Python, Vue, JavaScript
- Member of a small feature team responsible for designing and implementing a new data model
- Worked across many areas of the stack, from creating and modifying UI elements to writing periodic integrity scripts

Rover.com, Seattle, WA

Software Engineer I, Sept 2019 - Feb 2020

- Full stack developer on a New Business Lines team
- Provided feedback on design and implementation plans for new features
- Identified and filled gaps in internal documentation

Flatiron School, Seattle, WA

Software Engineering Coach, Nov 2018 - Sept 2019

- Front line of technical support for students
- Delivered lectures and led reviews on key concepts
- Assisted students in developing best practices for programming and debugging
- Led 1:1 review sessions to keep students on accelerated learning track
